

# High Speed CounterCurrent Chromatography

KUTUWA Sangyo Co., Ltd.

# Introduction

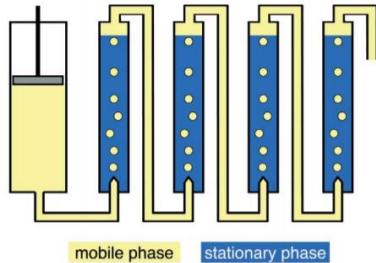

KUTUWA Sangyo Co., Ltd. is a professional manufacturer of HSCCC (High Speed counter current chromatography) instruments. We possess the patented HSCCC techniques and have manufactured a series of HSCCC equipments all by ourselves, which named Easy-PREPccc H.

特許第6028239号  
特許第6481135号

# Background

HSCCC is the most advanced technology in the liquid-liquid chromatography.

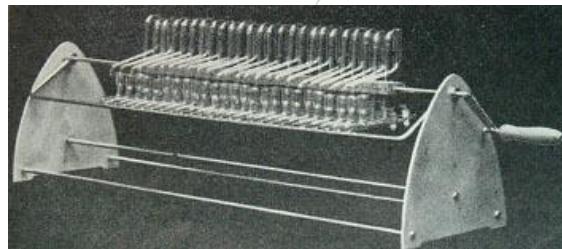

Droplet CounterCurrent Chromatography (DCCC)

# Principle of HSCCC

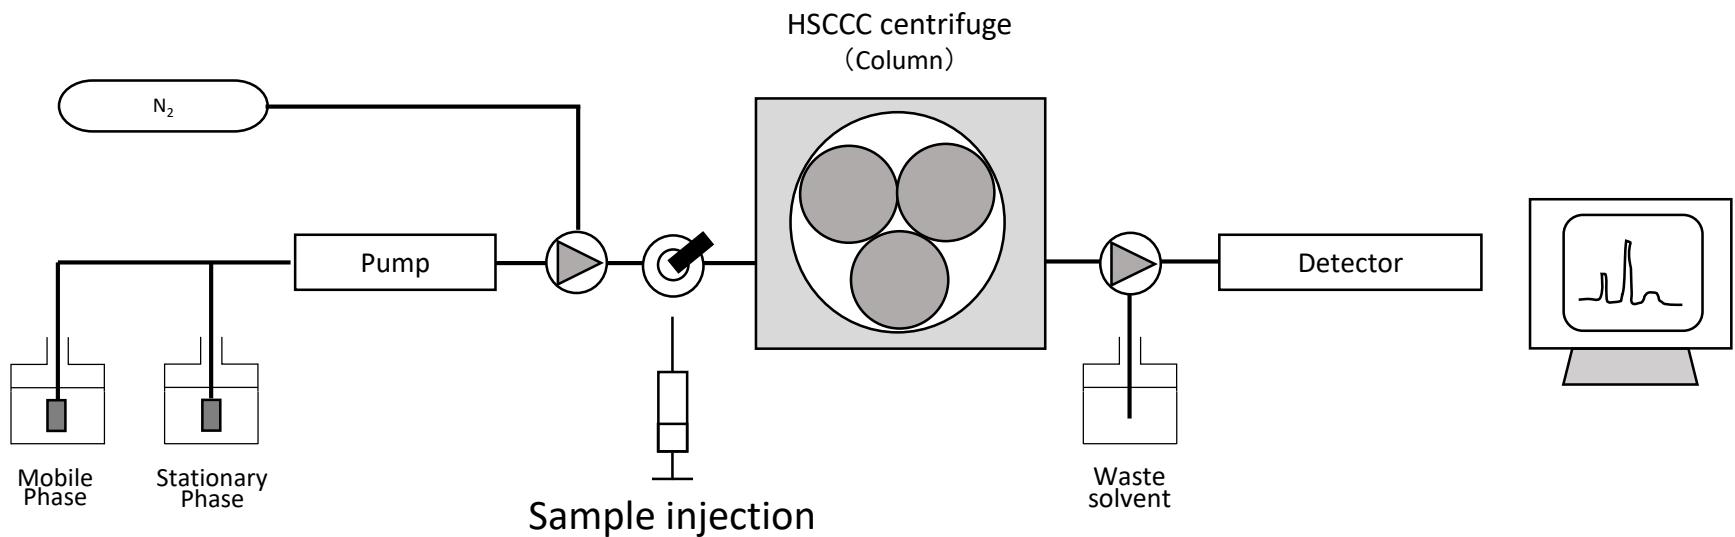

# Principle of HSCCC

The two-dimensional centrifugal force field caused by the simultaneous rotation and revolution hold one liquid phase as stationary phase in the separation tube.

HSCCC actualized high frequency extraction between two phases by high speed planetary centrifuge. Different components in the sample will be eluted due to their respective distribution coefficient.

# HSCCC Working Flow Chart

# Features of HSCCC

- High Performance
- 100% Sample Recovery
- Scaleable
- Cost-efficient
- Versatile Selectivity
- Safe Operation

# In comparison to HPLC

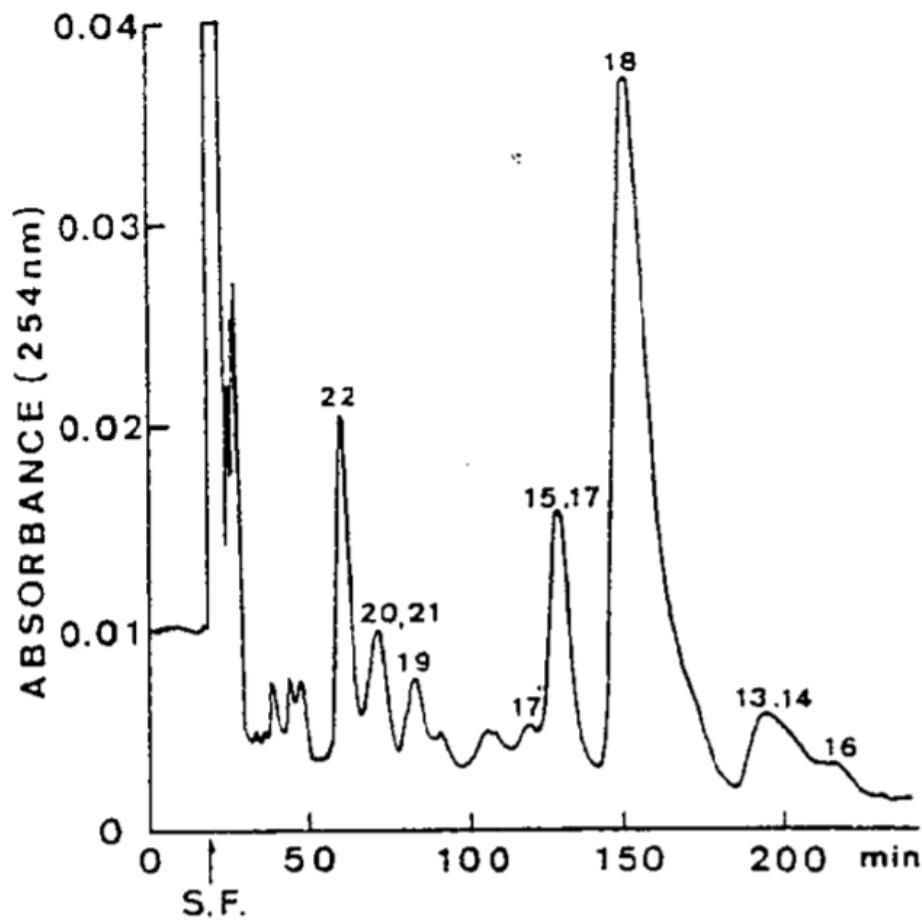

- Larger Preparation Capacity
- No Consumables & Low in Operation Cost
- No Irreversible Adsorption & Simplified Sample Pre-Preparation

# Application Field

HSCCC has been applied to different researches such as biochemistry, pharmacy, agriculture, environmental science, material research, chemistry, biology and inorganic ion. It is an extremely effective technique for the separation of natural products, antibiotics, proteins and noble metals.

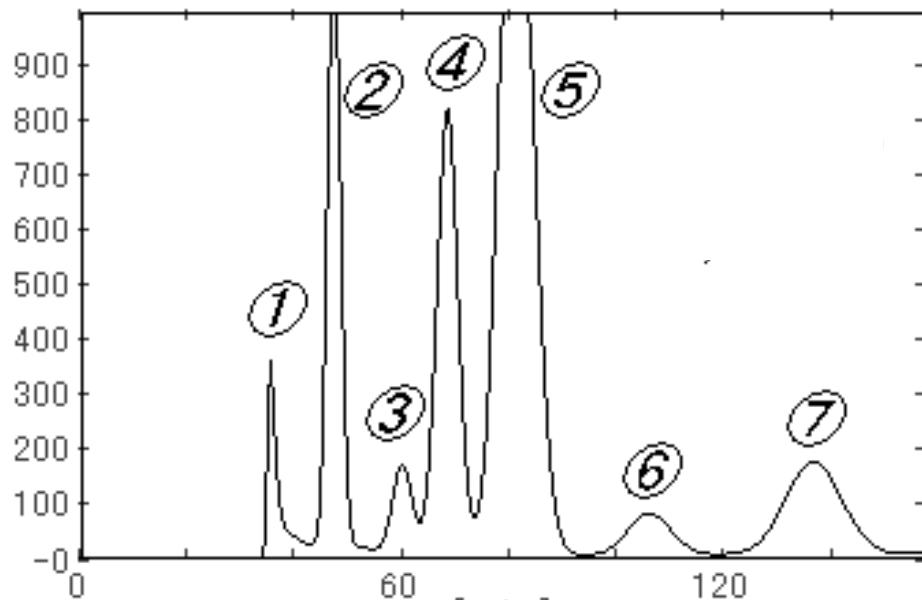

- (1) Separation of APIs from natural products
- (2) Separation of large biological molecules such as proteins, polypeptides and polysaccharides.
- (3) Separation of antibiotics
- (4) Separation of rare earth elements and noble metal elements
- (5) Purification of chemical synthetic products
- (6) Separation of functional food component
- (7) Separation and analysis of peptide residues
- (8) Quality control research of herbals
- (9) Separation of active marine ingredients

# Sample

Sample: Bacitracin Components(50mg)  
Solvent: Chloroform/ethanol/water(5:4:3)  
(lower phase as mobile phase, 3 ml/min)  
Detection: 254nm

# Sample

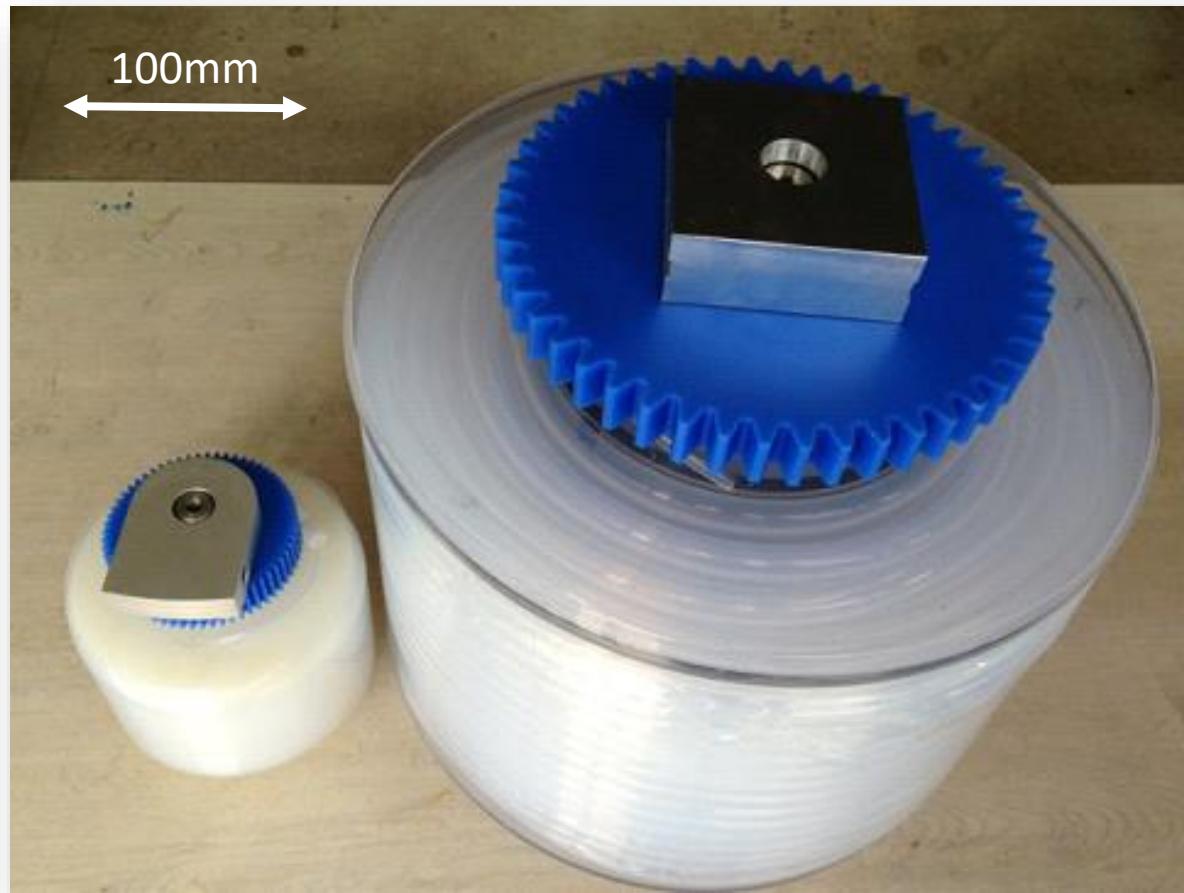

Sample: Polyphenols (100mg)  
Solvent: ethylacetate/formic acid(2%)/water  
(lower phase as mobile phase, 4 ml/min)  
Detection: 325nm

# Separation Production

|  |  |
|--|--|
| Antibiotics                              | Alertoxin I , Cyclosporine A, Cyclosporine B, Cyclosporine C, Cyclosporine D, Cytochalasin N, Erythromycin A, Erythromycin B, Erythromycin C, Isovaleryl spiramycin III  |
| Proteins                                 | $\alpha$ -Amylase, Cytochrome C, Hemoglobin, Lysozyme, Ovalbumin, Ovotransferrin, rhCIFN- $\alpha$   |
| Phenylpropanoids                         | Angelica coumarin, Artemisiae capillaris scoparone, Cnidii coumarin, Cortex fraxini coumarin, Costus alctone, Curdinone, Daphnoretin, Dehydro costus alctone, Deoxyschizandrin, Edgeworoside C, Germacrone, Pinoresinol diglucoside, Isopsoralen, Liriodendrin, Honokiol, Magnolol, Peucedanum decursivum coumarin, Peucedanum praeruptorum dunn coumarin, Psoralen, $\gamma$ -Schizadrin, Syringin, Thyme coumarin, Umbelliferone |
| Flavonoids                               | Baicalein, Baicalin, Chrysin, Daidzin, Daidzein, Didymin, Genistin, Glycitein, Glycitin, Hyperoside, Isoliquiritigenin, Isorhamneitin, Isovitexin, Isoorientin,Kaempferol, Kuyayinone, Liquiritigenin, Nairutin, Quercetin, Scutellarin, Trollius ledebouri flabonoid glycosides, Wogonoside   |
| Terpenoids                               | Atractyloside, Atractylenolide III, Bilobalide, Gentiopicrin, Ginkgolide A, Ginkgolide B, Ginkgolide C, Ginkgolide J, Harpagoside, Jasminoidin, Paclitaxel, Ursolic acid   |
| Quinones                                 | Cryptotanshinone, Tanshinone I , Tanshinone II A   |
| Steroids                                 | Androstenedinone, $\beta$ -Ecdysterone, Sitosterol, Spinasterol  |
| Alkaloids                                | Berberine, Camptothecin, Coptisine, Evodiamine, Heteratidine, Huperzine A, Huperzine B, Matrine, 15-a-Neoline, 1-Tetrahydropalmatine, Oxymatrine, Oxysohcarpine, Rutacarpine, Palmatine, Verticine, Verticinone  |
| Isomerides                               | Barbinervic Acid stereoisomer, Gambogic acid stereoisomer  |
| Saponins                                 | Astragaloside, Clinopodiside A, Ginsenoside-Re, Ginsenoside-Rg1, Glycyrrhizic acid   |
| Organic acid, acid anhydride, and esters | Cinnamic acid, 3,4-Dihydroxyphenyllactic acid, Eicosanoic acid, Ferulic acid, Gallic acid, Ginkgolic acid(C13:0), Ginkgolic acid(C15:1), Ginkgolic acid(C17:0)   |
| Polyphenols                              | EGCG, Salvianolic acid B, Theaflavin   |
| Other substances                         | Amygdalin, Aurentiamide acetate, Chebulagic acid, Chebulinic acid, Curculigoside, Curculigoside B, 10-Hydroxynonacosane Z-Ligustilide, Linderalactone, Pseudostellarin, Senkyunolide A   |

# Technology Scale UP

The large type HSCCC can load the sample in 10-30g

Preparative column

Large type column
